

Christian Mandujano Borjas

Computer Science Graduate

About me

Analytical and versatile Computer Science graduate specializing in embedded architectures, secure code design, and advanced backend data processing. Former IT Technician combining hands-on systems administration with a deep focus on network integrity and cybersecurity.

Proficiencies

Python

Rust, C++, C#

Java, C, SQL

HTML, CSS, JS

Technologies

Docker / Kubernetes
Linux (Arch/Garuda)
Ubuntu Server / OPNsense
Tailscale / Raspberry Pi
PostgreSQL / Jupyter

Personal

Location: United States of America
Denver, Colorado

Specialization

Secure Coding • Systems Integration • DevOps
• Network Integrity
• Infrastructure Automation

Leadership Roles

AISA (2024–2026)
Board / Technical Officer
Directed club technical strategy, evaluated frameworks, and mentored 30 members across coding sandboxes.

Lynx Robotics (2025–2026)
Board / Secretary
Governed platform documentation, ran workshops, and translated engineering metrics to stakeholders. Doubling membership in a two year span.

720.314.8517

CMBorjas

PROFESSIONAL SUMMARY

Proven technical leader combining hands-on system administration with a passion for transitioning into the cyber security sector. Skilled in building automated local ecosystems from the ground up to solve complex data challenges.

TECHNICAL EXPERIENCE

2021–2024

IT Professional Level 2 / IT Technician

MONARCH CASINO · Black Hawk, CO

Installed and maintained critical PC hardware, networking devices, and security infrastructure to maximize up-time. Troubleshooting for an enterprise Windows environment upgrade saved \$46,000. Managed network security, configurations, backups, and user access control permissions strictly following data privacy policies.

EDUCATION & CERTIFICATIONS

Graduated 2026

B.S. Computer Science

GRADUATED · UC Denver

Expected 2026

Network+ & Security+

COMP.TIA · Denver

CORE TECHNICAL PROJECTS

2026

Desky

PROJECT LEAD · Senior Design

Spearheaded architectural goals focusing on the transition from digital AI models to physical, embodied AI systems. Coordinated multi-disciplinary engineering student milestones.

2026-Pres.

Chantico

CORE DEVELOPER · Local Deployment

Developed an AI-driven digital guardian designed to parse OPNsense logs for real-time security anomalies. Integrated switch-level configurations to shield legacy IoT hardware

2023–Pres.

Machine Learning (ML-DM)

RESEARCHER · Academic

Built an AI framework for Dungeon Masters using LangChain, Flask, and an NLP-based interaction loop. Leveraged Docker containerization for production parity environment testing.

2024

Trip Guardian

CREATOR · Denver, CO

Engineered an AI-driven web tool calculating regional safety ratings and live weather overlays by safely structuring open public safety datasets.

2023

Baby Weight Prediction

COMPETITOR · Kaggle

Designed and executed Random Forest and Linear Regression pipelines natively in Python, yielding an optimized 10% improvement in target RMSLE score benchmarks.
